

XM radio is the best thing that has happened to radio since FM was added. There are channels for children which are a real boon to parents when traveling. There are weather channels that are a God-send during bad weather. It's not always possible to find a local station reporting the weather at the time it's needed. Traffic channels help avoid long delays and help in cutting the amount of traffic in the tie-ups. There are many areas of the country that have no radio broadcasts. XM radio is a necessity for these areas. For those that travel for a living it is a necessity - not a luxury. The subscribers pay for this entertainment just as TV cable and satellite subscribers do. Radio (FM and AM) are free so there will always be radio available to everyone.

Please leave this service alone. DO NOT let the National Association of Broadcasters tell this nation what we can and cannot listen to. Doing so will be a huge disservice and will amount to censorship.
